BACHELOR OF ENGINEERING

Gujarat Technological University
2018 - 2022

PROJECTS

DIGIHEALTHCARE.AI (WEBSITE)

Digihealthcaer.ai is a website for our health products (apps) that delivers solutions such as telemedicine, remote patient monitoring, women's health and mental health. I completely design this website and two apps as per our solutions and one web app from user and admin side. One app is for manage your health vitals such as heart rate, blood pressure, pulse oxi etc and for your food and workout diary , lab records. Second app is for women's health for tracking pregnancy and period cycle , mind relaxation exercise and meditation.

CAR MANAGEMENT APP (ANDROID & IOS APP)

This application is for managing your cars and drivers. This application includes features such as travel schedule, carpooling and taxi service. I designed travel schedule part for now and this app is under designing currently and designed complete user experience for this application as per client's requirement

TESTLINE (WEB APP)

Testline is a web application for online examination. I designed this web application from three sides one is form admin, second is from instructor and third is form student. This application includes features like question bank creation, test generation, exam result analysis, two different dashboards (one for admin and second for instructor), exam monitor mode and exam mode (for students)
